PROFILE SUMMARY

Proactive Computer Science & Engineering undergraduate student with a consistently strong academic record, specializing in Artificial Intelligence, Cybersecurity, and web development. Proficient in Python, C, and Java, with a rigorous foundation in Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), and database fundamentals. Experienced in leading technical communities and developing collaborative, team-based software solutions in competitive environments. Passionate about applying analytical thinking and problem-solving skills to build impactful and innovative technology solutions.

EDUCATION

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
B.Tech.,CSE	NSS College of Engineering Palakkad	9.86	2024- Present
Senior Secondary	Jawahar Navodaya Vidyalaya, Palakkad	92.6	2024
Secondary	Jawahar Navodaya Vidyalaya, Palakkad	93.6	2022

SKILLS

- **Programming Languages:** Python, C, Java, MySQL, Bash, HTML, CSS
- **Core Competencies:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Artificial Intelligence, Machine Learning, Web Development, Graphic Designing
- **Technologies & Tools:** Git/GitHub, Figma, Canva, TensorFlow, Streamlit, React
- **Soft Skills:** Cross-functional Leadership, Communication, Agile Problem Solving, Project Management

EXPERIENCE

- **Infosys Springboard** Aug 2025 - Oct 2025
Artificial Intelligence Intern Virtual
 - Developed an end-to-end machine learning web application designed to analyze facial aging signs, managing the full project lifecycle from dataset preprocessing to Streamlit UI deployment.
 - Presented the end-to-end deep learning architecture and live application to Infosys engineering teams in a formal online presentation, demonstrating strong technical communication and comprehensive project lifecycle management.
- **1M1B (One Million for One Billion)** Dec 2025 - Jan 2026
Artificial Intelligence Intern Virtual
 - Developed 'Eco-Travel AI', an AI-powered carbon footprint calculator, during a highly selective virtual internship utilizing Python, Streamlit, and the Google Gemini API.
 - Applied enterprise-grade AI technologies to solve real-life sustainability challenges, aligning application features directly with UN Sustainable Development Goals (SDGs).
 - Mastered core concepts of Responsible AI through an intensive IBM SkillsBuild curriculum, translating theoretical sustainability frameworks into a functional, impact-driven software solution.

PROJECTS

- **AI Dermal Scan: Facial skin-aging detection system** Oct 2025
Tools: Python, OpenCV, Tensorflow, Keras, Streamlit 
 - An AI-powered computer vision application using an EfficientNetB0 base model to classify facial skin conditions (wrinkles, dark spots, puffy eyes) and a custom CNN regression model for continuous age prediction.
 - Implemented fine-tuning with the Adam optimizer, ReduceLROnPlateau, and EarlyStopping techniques to optimize model performance.
 - An interactive frontend using Streamlit, seamlessly integrating the deep learning backend to provide real-time facial analysis and user-friendly visualizations.
